Refused (non carrier fault)	100%
Return to Vendor	100% of forward zone charge
Exchange	200% of Zone Rate

Scope of Work

This Scope of Work outlines the delivery and installation services provided for major household appliances. The intent is to ensure a consistent, safe, and professional experience for every customer while clearly defining what is included at each service level. All services are performed by trained delivery personnel following industry-standard handling practices to protect the home, the product, and the customer experience.

1. Order Scheduling

Scheduling Cadence

- Orders are scheduled for pick up and delivery - within 3 days of dispatch unless dedicated days are pre-established. Deliveries are not available on statutory holidays. Customers must be available on the scheduled delivery day.

Order Submission Deadline

- Orders must be submitted to RS Solutions in the provided Excel template by 3:00 PM the day before the delivery day.

Scheduling Window RS to Schedule

- Delivery appointments are assigned within predefined service days. RS will contact customers with a confirmed 3-hour time window and update when routing is completed.

Order Confirmation Requirements

- All appliance orders must be fully confirmed—including model numbers, quantities, and complete delivery address details—before scheduling can occur.
    - Include any additional note requirements: Elevator bookings, buzzer codes

Order Completion

- RS will complete all of the work using the driver's app.
    - Photos of each product on the completed delivery
    - Photos of any installations or billable services
    - Photos of any cancelation reason proving the issue
    - NAH needs a photo of the home
    - No fit needs to show the area and a measurement of the appliance and space
    - Clear Photo of the POD/Acceptance Form

Customer Availability

- An adult (18+) must be present during the scheduled delivery window to sign for the delivery and approve final placement

2. Prepping for a delivery

Access Requirements

- Customers must ensure clear and unobstructed access to the home and the final placement location. This includes stairways, hallways, elevators, and doorways. Any access limitations—tight turns, narrow staircases, low ceilings, gated communities, or special entry instructions—must be communicated at the time of scheduling.

Space Preparation

- The delivery area must be cleared prior to arrival. This includes removing furniture, décor, or personal items that may block the path or prevent safe placement of the appliance.

Driveway & Entry Access

- Driveways, walkways, and entry points must be free of snow, ice, debris, or vehicles that could restrict access. If the delivery requires alley access or has parking limitations, this must be communicated in advance.

Pets & Household Safety

- Pets should be secured in another room during delivery to ensure the safety of both the delivery team and the household.

Existing Appliance Preparation

- If an existing appliance is being removed, it must be disconnected and emptied prior to the team's arrival unless disconnection services were specifically included in the order.

Power & Water Requirements

- Customers must ensure that electrical, water, and gas connections are accessible and meet standard installation requirements. Any non-standard connections or modifications must be disclosed during scheduling

3. Service Limitations

Same-Floor Moves Only

- Delivery teams will only move appliances to the same floor as the delivery location, and only if the appliance fits through all access points without removing doors, railings, trim, or making any structural adjustments. This service must be paid for in advance.

Like-for-Like Appliance Moves

- Teams will only move or relocate appliances that are the same type as the appliance being delivered (e.g., fridge for fridge, washer for washer). No substitutions or mixed-type moves are permitted.

Haul-Away Requirements

- Haul-away services are only provided when the service has been paid for in advance. Teams will only haul away appliances that are the same type as the appliance being delivered.

Unserviceable or Unsafe Conditions

- Delivery teams may decline service if conditions are unsafe or inaccessible, including but not limited to: blocked pathways, hazardous environments, unsecured pets, or appliances that cannot be moved without risk of damage or injury.

No Disassembly of Home Fixtures

- Teams will not remove doors, handrails, trim, cabinetry, or make any modifications to the home to complete a delivery or removal.

No Installation of Non-Standard Connections

- Delivery teams will not install appliances requiring non-standard electrical, plumbing, or gas modifications. Any required upgrades must be completed by the customer prior to delivery.

Refused or Cancelled Orders

- Any cancelled or refused orders will be returned to the corresponding stores on the **next scheduled pick up date** or rescheduled for the next available delivery date.

Weather or Access-Related Delays

- Deliveries may be delayed or rescheduled due to severe weather, unsafe road conditions, or restricted site access. Customers will be notified as soon as possible.

Appliance Condition Requirements for Haul-Away

- Appliances must be fully disconnected, emptied, and free of water or ice before haul-away. Teams may decline haul-away if the appliance is not safe to move.

4. Packaging Requirements & Product Condition Standards

To ensure all appliances arrive safely and in verifiable condition, all products must meet the following packaging and documentation standards prior to pickup:

Required Product Condition Photos

Before packaging products, the shipping party must take photos of:

1. All 4 sides of the product
2. Top panel (when accessible)
3. Pictures of Damage
4. Full packaging view showing cardboard protection and wrap applied
5. Photos must be time stamped and tied to the correct model/order.

Packaging Standards

- Full Surface Protection: All appliances must be protected on all sides using rigid cardboard corner guards or full cardboard panels.
- Secure Wrapping: Units must be fully wrapped in stretch film or shrink wrap.
- Stabilization: Loose components must be secured inside the appliance or boxed.
- Palletization (If Applicable): Pallets must be in good condition and shrink-wrapped tightly.

5. Appliance Deliveries

Appliance	Threshold Delivery	White Glove Delivery
Refrigerators	• Deliver to first dry area • No unboxing • No movement beyond threshold	• Deliver to designated room, including stairs • Unbox and place • Install Handles • Remove debris • Level unit
Washers	• Deliver to first dry area • No unboxing • No connections	• Deliver to laundry room • Unbox and place • Remove debris • Level unit
